This article deals with comparison in that time used technology - cementation of copper - in historical mining towns – Smolník and Špania Dolina. It analyzes this extraordinary phenomenon from several points of view, such as importance for the time period, use at the time, development views of the scientific community, etc. For comparison were used simple presentation method based on graphic and animation software. The presentation method had shown the historical mining in a wider context and allow to combine various facts. Such presentation may bring unexpected views well with other historical areas.
